

WINDOWS INSTALL

1) INSTALLING PYTHON 3

Do you have python already installed on your computer?
Check by opening your command prompt (CMD) and typing

```
$ python -V
```

If python is installed on your system, you should see which version you currently have. If it shows version 3.x.x, please proceed to step 2.

If python is not installed you will see an error or command unknown

If you do NOT have python installed on your system download the Windows installer:

[HERE](#) for **x64** bit (Windows 10, 64-bit)

Before installing select the “Add to PATH option”

2) INSTALLING OPENCV

Upgrade pip

```
$ python -m pip install --upgrade pip
```

Run the command below in your terminal to install python OpenCV.

```
$ pip install opencv-contrib-python --upgrade
```
